

開發環境

- linux 18.04
- python3.6
- matplotlib
- re
- sys
- urllib

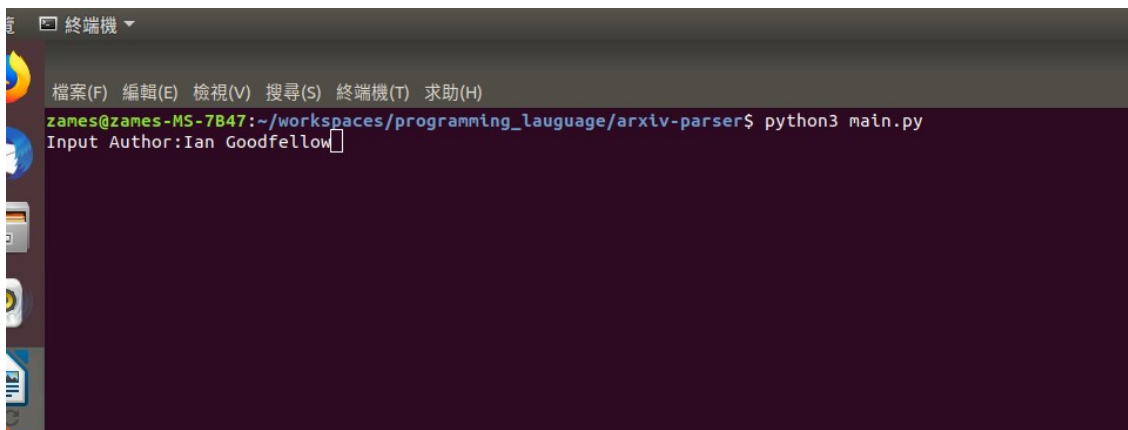

執行步驟

於專案目錄底下執行 `python3 main.py`

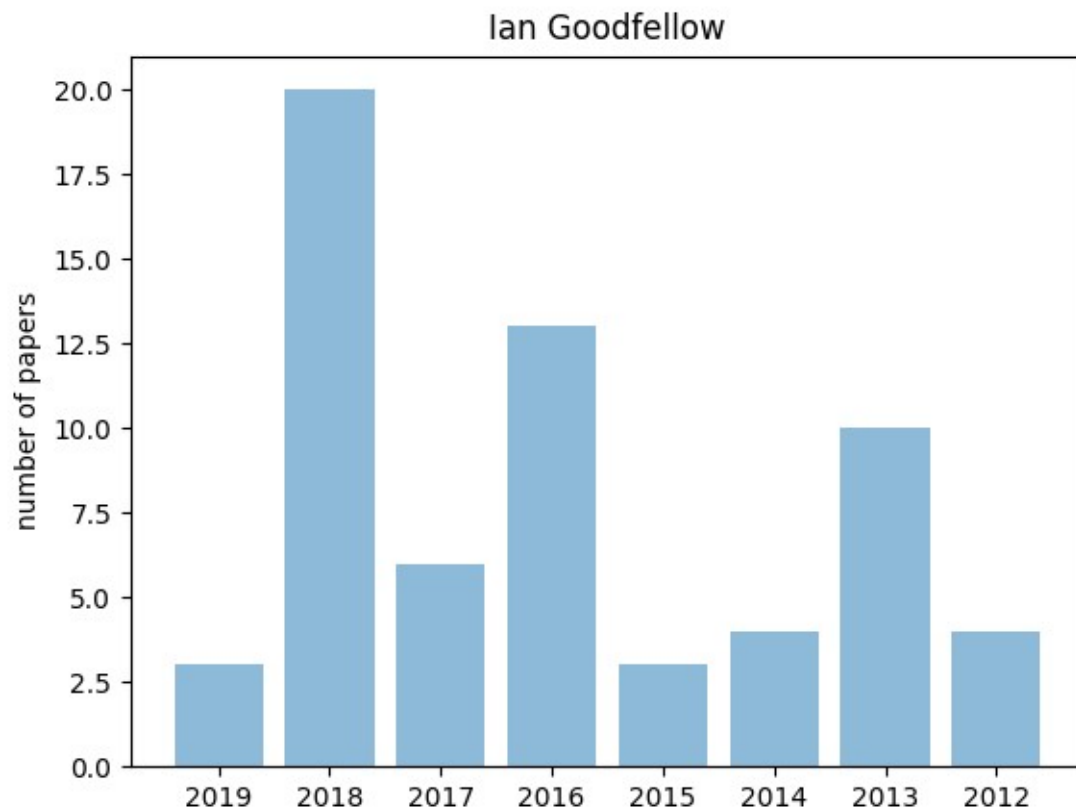

A terminal window titled "終端機" (Terminal) with a menu bar containing "檔案(F)", "編輯(E)", "檢視(V)", "搜尋(S)", "終端機(T)", and "求助(H)". The prompt is "zames@zames-MS-7B47:~/workspaces/programming_lauguage/arxiv-parser\$". The command "python3 main.py" has been executed, and the prompt has changed to "Input Author:". The cursor is positioned at the end of the prompt, ready for input.

輸入 input Author 後按 enter

A terminal window titled "終端機" (Terminal) with a menu bar containing "檔案(F)", "編輯(E)", "檢視(V)", "搜尋(S)", "終端機(T)", and "求助(H)". The prompt is "zames@zames-MS-7B47:~/workspaces/programming_lauguage/arxiv-parser\$". The command "python3 main.py" has been executed, and the prompt has changed to "Input Author:". The text "Ian Goodfellow" has been entered, and the cursor is at the end of the input. The "enter" key has been pressed, and the prompt has changed to "Input Author:". The cursor is positioned at the end of the prompt, ready for input.

然後根目錄底下 會產生一張 numberOfpapers.png 是第一題的答案

並且印出 coauthor 並根據字母排序

```
zames@zames-M5-7B47: ~/workspaces/programming_language/rxtv-parser$ clear
zames@zames-M5-7B47:~/workspaces/programming_language/rxtv-parser$ python3 nata.py
Input Author:Ian Goodfellow
processing numberofpapers ...
done
processing numberofcoauthor ...

```

程式碼解釋 主要分兩個檔案 在 src 中 有 search.py and plot.py
plot.py 只是把 處理過後的資料以 bar plot 畫出來並存檔
以下是 search.py

```
5 |
6 | def search(author,start):
7 |     if(" " in author):
8 |         author = author.replace(" ", "+") #確保輸入時的空白有代換
9 |     url = f"https://arxiv.org/search/?query={author}&searchtype=author&size=50&start={start}"
10 |    content = request.urlopen(url)
11 |    res = content.read().decode('utf-8')
12 |    return res #return html
13 | def numberOfpapers(author):
14 |     dic = {} #所有年度資料的字典
15 |     start = 0 #去抓下一頁的資料要用到的參數
16 |     pattern = "has-text-black-bis has-text-weight-semibold\>originally announced</span>[\s\S]*?</p>" #每一筆論文
17 |     year = '[0-9][0-9][0-9][0-9]' #抓發布年的pattern
18 |     while(1): #迴圈確保有搜尋結果不只一頁
19 |         res = search(author,start)
20 |         result = re.findall(pattern, res)
21 |         if(not len(result)):
22 |             break
23 |         for r in result:
24 |             date = re.search(year,r).group()
25 |             if(date in dic): #放到字典
26 |                 dic[date] += 1
27 |             else:
28 |                 dic[date] = 1
29 |         start += 50
30 |     return dic
31 | def numberOfcoauthor(author):
32 |     dic = {} #所有共同作者的字典
33 |     start = 0
34 |     pattern = "<span class=\"search-hit\">Authors:</span>[\s\S]*?</p>" #每一筆論文
35 |     coauthorPattern = "<a href=[\s\S]*?</a>" #每一筆論文下所有個共同作者
36 |     while(1):
37 |         res = search(author,start)
38 |         result = re.findall(pattern, res)
39 |         if(not len(result)):
40 |             break
41 |         for r in result:
42 |             coauthors = re.findall(coauthorPattern,r) #每一筆論文下每一位共同作者
43 |             for coauthor in coauthors:
44 |                 temp = re.split(r'<a href=[\s\S]*?>',coauthor)[1] #把不必要的字串拿掉只剩下作者名子
45 |                 nameOfcoauthor = re.split(r'</a>',temp)[0] #把不必要的字串拿掉只剩下作者名子
46 |                 if(nameOfcoauthor in dic): #放到字典
47 |                     dic[nameOfcoauthor] += 1
48 |                 else:
49 |                     dic[nameOfcoauthor] = 1
50 |         start += 50
51 |     if(author in dic): #把原作者從共同作者拿掉
52 |         del dic[author]
53 |     return dic
```

剩下的程式部份都是印出來一些 message 告訴你在幹麻而已。
